Previous week	80	21	1	102

▼ **Regional Activity:** Seismicity continued for the second straight week southwest of Walker Lake, in the Aurora Peak area. The activity, which consisted of ten 2.0s and one in the 1.0 range, was centered in Mud Creek Valley at depths between 8-14 km. Activity in the M1-2 range and these depths is common here, with a few dozen quakes being recorded each year. However, activity in the +3.0 range is less common. The last 3.0 was recorded November, 1991 and occurred as part of a significant sequence that began August 12, with a 4.6 event, the largest quake in the area since detailed monitoring began in the 1970s.

▼ **Mt. Morrison Seismic Trend:** Decreased to 37 events, with only one event in the 2.0 range.

▼ **Long Valley Caldera:** Increased to 37 events, including one as large as 2.8. Nearly all of the activity was centered 1 mi. northwest of the Mammoth Airport.
